DATE OF INFO. SUPPLEMENT TO REPORT NO.

- There has been no abnormal calling of reserve members of the armed forces, nor does it appear that military leave is being restricted. At Milovice (051/GOC), which is the main military training camp in Bohemia, many officers and enlisted men on leave were observed at the railway station.
- 2. In the Domazlice (N50/P70) Klenec (N51/F61) area, no military units were observed guarding the border, nor had the SNB border guards been increased. Rather, it was reported that certain SNB members who had served with the SNB before the February coup had been removed from the area.
- 3. No military transports or guards were seen at the railroads, and civilian travel did not appear to be curtailed. No unusual road repair activity was noticed. Work already started was proceeding at a normal page.
- 4. Automobiles and trucks had already been classified during 1949-50 for military use. There was no evidence of requisitioning of such vehicles. This applied also to horses considered desirable by the military.
- 5. The population of the village of Ples near Prima (N50/P53) had been evacuated at the end of June 1950. Since the village was situated on the border, it was a vantage place for escape from the country.
- 6. There was no evidence of intensified training in civilian anti-aircraft and anti-gas defense.
